

Quantitative textural measurements in igneous and metamorphic petrology

Acknowledgements.....	2
1 Introduction.....	3
1.1 Petrological methods.....	3
1.2 Qualitative versus quantitative data.....	4
1.3 What do I mean by texture?.....	5
1.4 Information density and data sources.....	6
1.5 Structure of this book.....	7
1.6 Software applications for quantitative textural studies.....	7
2 General analytical methods.....	10
2.1 Introduction.....	10
2.1.1 Observations in three and two dimensions.....	10
2.1.2 Grain size limits.....	11
2.1.3 Edge effects.....	11
2.1.4 Textural development sequences.....	11
2.2 Complete three dimensional analytical methods.....	12
2.2.1 Serial sectioning.....	12
2.2.2 Optical scanning and confocal microscopy.....	13
2.2.3 X-ray tomography.....	13
2.2.4 Magnetic resonance imaging.....	14
2.3 Extraction of grain parameters from data volumes.....	14
2.4 Destructive partial analytical methods.....	15
2.4.1 Sample disaggregation.....	16
2.4.2 Sample dissolution.....	16
2.5 Surface and section analytical methods.....	17
2.5.1 Surface preparation techniques and artefacts.....	17
2.5.2 Electronic and associated analytical methods.....	18
2.5.2.1 Backscattered electron images.....	19
2.5.2.2 X-ray maps – EMP, SEM and Micro-XRF.....	20
2.5.2.3 Cathodoluminescence.....	21
2.5.2.4 Orientation contrast imaging.....	21
2.5.3 Optical analytical methods.....	22
2.5.3.1 Transmitted light.....	22
2.5.3.2 Reflected light.....	24
2.5.3.3 Nomarski (DIC) microscopy.....	25
2.5.4 Slabs and outcrops.....	26
2.6 Extraction of textural parameters from images.....	27
2.6.1 Size limits of measurements.....	28
2.6.2 Manual image analysis.....	28
2.6.3 Automatic image analysis.....	29
2.6.3.1 Grey-scale images.....	29
2.6.3.2 Multichannel images.....	30
2.6.3.3 Final processing of classified images.....	32
2.6.4 Computer-integrated polarisation microscopy.....	32
2.6.5 Classified image measurement.....	33
2.7 Calculation of three dimensional data from two dimensional observations.....	33
2.7.1 Stereology.....	33
2.7.2 Stereologically exact ‘Global parameters’.....	33
2.8 Verification of theoretical parameter distributions.....	35
2.8.1 Chi-squared test.....	35
2.8.2 Straight line distributions.....	36
2.9 Summary.....	37
3 Grain and crystal sizes.....	38
3.1 Introduction.....	38
3.1.1 What are size and size distributions?.....	38
3.1.2 Linear size definitions.....	39
3.2 Review of theory.....	40

3.2.1	Primary kinetic crystallisation processes	40
3.2.1.1	Nucleation of crystals	41
3.2.1.2	Growth and solution	42
3.2.2	Kinetic textures	45
3.2.2.1	Steady-state crystallisation models.....	45
3.2.2.2	Batch crystallisation – Marsh (1998) model	47
3.2.2.3	Other kinetic population models.....	47
3.2.3	Mechanically modified textures.....	48
3.2.3.1	Compaction and filter pressing.....	48
3.2.3.2	Crystal accumulation.....	49
3.2.3.3	Mixing of magmas and crystal populations	50
3.2.4	Textural effects of equilibration.....	52
3.2.4.1	Energy considerations.....	52
3.2.4.2	Lifshitz-Slyozov-Wagner coarsening model.....	54
3.2.4.3	Communicating Neighbours coarsening model	55
3.2.4.4	Open systems and fluid focusing	56
3.2.4.5	Adcumulus growth.....	56
3.2.4.6	Coarsening in almost completely solid materials: metamorphic and sub-liquidus plutonic rocks	56
3.2.5	Crystal deformation and fragmentation.....	57
3.2.5.1	Crystal deformation	57
3.2.5.2	Crystal fragmentation (cataclasis).....	58
3.2.6	Closure in grain size distributions	59
3.3	Analytical methods	61
3.3.1	Three dimensional analytical methods	62
3.3.1.1	Solid materials.....	62
3.3.1.2	Unconsolidated or disaggregated materials.....	62
3.3.2	Two dimensional analytical methods.....	63
3.3.2.1	Grain outline width and length definitions	63
3.3.3	Intersection mean size methods	64
3.3.3.1	ASTM mean and maximum size methods	64
3.3.3.2	Grain number by shape independent intersection methods	65
3.3.3.3	Mean grain size by shape independent intersection methods.....	65
3.3.4	Extraction of grain size distributions from grain intersection data	66
3.3.4.1	Nature of the problem	66
3.3.4.2	Parametric solutions.....	67
3.3.4.3	Distribution-free solutions.....	68
3.3.4.4	Saltikov method.....	71
3.3.4.5	Uncertainty analysis of the Saltikov method	74
3.3.4.6	Data conversion methods used in early CSD studies – Wager and Gray methods. 75	
3.3.5	Extraction of grain size distributions from projected grain data.....	76
3.3.6	Verification and correction of grain size distributions using the volumetric phase proportion.....	77
3.3.7	Graphical display of grain size distributions.....	78
	Size limits of measurements.....	79
	Semi-logarithmic – ‘CSD Diagram’	79
	Bi-logarithmic – ‘Fractal’	81
	Lognormal and loghyperbolic	81
	Relative frequency and other methods.....	82
3.3.8	Overall grain size parameters - moments of number density	83
3.4	Typical applications	83
3.4.1	Mafic Volcanic rocks	84
3.4.1.1	Plagioclase in a basaltic lava lake.....	84
3.4.1.2	Plagioclase in basalt flows	85
3.4.1.3	Plagioclase growth rates in basaltic magmas.....	87
3.4.1.4	Plagioclase in andesite	87
3.4.1.5	Olivine in picrite	89
3.4.1.6	Anorthoclase in phonolite	90

3.4.2	Mafic Plutonic rocks	90
3.4.2.1	Gabbro	91
3.4.2.2	Troctolite and anorthosite.....	92
3.4.2.3	Impact melt rocks	93
3.4.3	Silicic volcanic rocks	93
3.4.3.1	Plagioclase in dacite	93
3.4.3.2	Zircon in rhyolite tuffs and lavas.....	95
3.4.4	Silicic plutonic rocks.....	96
3.4.4.1	Orthoclase, plagioclase and quartz in granite porphyry.....	96
3.4.4.2	K-feldspar in granodiorite	96
3.4.5	Other undeformed minerals	97
3.4.5.1	Diamonds	97
3.4.5.2	Carbonates and chromites	99
3.4.5.3	Chondrules and minerals in meteorites.....	99
3.4.5.4	Hematite in Pseudotachylytes.....	101
3.4.5.5	Experimental studies.....	101
3.4.6	Undeformed metamorphic minerals.....	102
3.4.6.1	Garnet	102
3.4.6.2	Accessory minerals	103
3.4.6.3	Crystals in migmatites	103
3.4.6.4	Hydrothermally grown crystals	103
3.4.7	Deformed and broken crystals and blocks.....	104
3.4.7.1	Olivine in mantle lherzolites	104
3.4.7.2	Dynamic recrystallisation	104
3.4.7.3	Broken blocks and crystals	105
4	Grain shape	107
4.1	Introduction.....	107
4.2	Brief review of theory.....	108
4.2.1	Shapes of isolated undeformed crystals.....	108
4.2.1.1	Equilibrium forms.....	108
4.2.1.2	Growth forms.....	109
4.2.1.3	Solution forms	109
4.2.2	Shapes of deformed crystals	109
4.2.3	Dihedral angles of crystals in rocks	110
4.3	Methodology.....	112
4.3.1	Three dimensional analytical methods	112
4.3.2	Section and surface analytical methods	113
4.3.3	Extraction of overall grain shape parameters	114
4.3.3.1	Overall axial ratios.....	114
4.3.3.2	Intersection data.....	114
4.3.3.3	Projection data	116
4.3.4	Extraction of grain boundary parameters.....	117
4.3.4.1	Fractal analysis of grain shapes.....	117
4.3.4.2	Gaussian Diffusion-Resample method.....	118
4.3.4.3	Fourier analysis of grain shapes	118
4.3.4.4	Shape parameters used in sedimentology.....	120
4.3.5	Determination of dihedral angles	120
4.4	Typical applications.....	121
4.4.1	Undeformed crystalline rocks.....	121
4.4.1.1	Plagioclase	121
4.4.1.2	Zircon	122
4.4.1.3	Other minerals.....	123
4.4.2	Deformed rocks.....	124
4.4.2.1	Sutured quartz grain boundaries.....	124
4.4.2.2	Calcite in mylonites	125
4.4.3	Dihedral angles	125
5	Grain orientations – rock fabric.....	129
5.1	Introduction.....	129
5.2	Brief review of theory.....	130

5.2.1	Fabrics developed during growth of new crystals.....	130
5.2.1.1	Crystallisation from a magma.....	130
5.2.1.2	Solid-state mineral crystallisation.....	130
5.2.2	Fabrics produced during magmatic and solid-state deformation of existing crystals.....	131
5.2.2.1	Property changes during solidification.....	131
5.2.2.2	Magmatic deformation.....	132
5.2.3	Influence of coarsening and pressure solution compaction on fabric.....	133
5.3	Introduction to fabric methodology.....	134
5.4	Determination of shape preferred orientations.....	135
5.4.1	Direct, three-dimensional analytical methods.....	135
5.4.2	Section and surface analytical methods.....	135
5.4.3	Extraction of orientation parameters.....	135
5.4.3.1	Inertia tensor method.....	135
5.4.3.2	Intercept (intersection) method.....	136
5.4.3.3	Grey-scale image analysis methods.....	137
5.5	Determination of lattice preferred orientations.....	137
5.5.1	Optical analytical methods: Regular and Universal stage.....	137
5.5.2	Computer-integrated polarisation microscopy.....	138
5.5.3	Electron backscatter diffraction (EBSD).....	138
5.6	3D bulk fabric methods – combined SPO and LPO.....	140
5.6.1	Anisotropy of magnetic susceptibility.....	140
5.6.2	Anisotropy of (partial) anhysteretic remanent magnetization.....	142
5.6.3	Other integrated (bulk) analytical methods.....	143
5.7	Extraction of grain orientation data and parameters.....	143
5.7.1	Individual grain orientation display.....	144
5.7.2	Mean orientation from individual data.....	145
5.7.3	Integration of 2D section data into a 3D orientation ellipsoid.....	146
5.8	Typical applications.....	147
5.8.1	Flow in lavas.....	147
5.8.1.1	Mafic and intermediate lavas.....	147
5.8.1.2	Felsic lavas.....	149
5.8.2	Flow in dykes.....	149
5.8.3	Magmatic deformation in plutonic rocks.....	151
5.8.3.1	Mafic rocks.....	151
5.8.3.2	Granitoid intrusions.....	154
5.8.3.3	Engineering studies.....	155
5.8.4	Solid-state deformation.....	156
5.8.5	Fabric development in pyroclastic rocks.....	156
6	Grain spatial distributions and relations.....	158
6.1	Introduction.....	158
6.2	Brief review of theory.....	158
6.2.1	Nucleation of crystals.....	158
6.2.2	Geochemical self-organisation.....	159
6.2.3	Grain aggregation and agglutination.....	161
6.2.4	Magma mixing.....	161
6.2.5	Grain packing.....	162
6.3	Methodology.....	162
6.3.1	Three dimensional analytical methods.....	162
6.3.2	Section and surface analytical methods.....	163
6.3.3	Extraction of spatial distribution parameters.....	163
6.3.3.1	Nearest neighbour distance ('Big' R).....	163
6.3.3.2	Cluster analysis.....	165
6.3.3.3	Touching crystals.....	166
6.3.3.4	Wavelet transform and Fourier analysis.....	166
6.3.4	Extraction of mineral association parameters.....	167
6.3.4.1	Mineral point correlations.....	167
6.3.4.2	Box-counting method.....	168
6.4	Typical applications.....	169
6.4.1	Metamorphic rocks.....	169

6.4.2	Igneous rocks.....	169
7	Textures of fluid-filled pores	172
7.1	Introduction.....	172
7.2	Brief review of theory.....	173
7.2.1	Permeability	173
7.2.2	Magmas and partially molten rocks	173
7.2.3	Bubbles in magmas	174
7.2.3.1	Nucleation and growth of bubbles.....	174
7.2.3.2	Bubble size distributions and shapes.....	176
7.3	Methodology.....	176
7.3.1	Pore surface area measurements	177
7.3.1.1	Analytical methods	177
7.3.1.2	Image analysis method	177
7.3.2	Three dimensional analytical methods	178
7.3.2.1	Total porosity.....	178
7.3.2.2	Three dimensional imaging techniques.....	178
7.3.3	Two dimensional analytical methods	179
7.3.3.1	Measurement of pore outlines.....	179
7.3.3.2	Conversion of two dimensional data to 3D pore parameters.....	179
7.3.4	Measurement of permeability.....	180
7.4	Parameter values and display	181
7.4.1	Display of pore size distributions	181
7.4.2	Overall pore size parameters.....	182
7.4.3	Pore shapes.....	182
7.5	Typical applications.....	182
7.5.1	Volcanic rocks.....	183
